

# fumapem® F-14100

## General

*Membrane type:* Fluorinated cation-exchange membrane – non-reinforced – thickness 100 µm, with low resistance, high mechanical stability, low dimensional swelling, and high stability in acidic environment.

*Application:* Various electrochemical application such as Fuel Cells or Redox-Flow Batteries etc.

Membranes are identified by membrane type and identification number (Lot Number). Please refer to this type and identification number in case of queries.

## Delivery

The membrane is the nearly colorless, transparent foil, delivered in between paper layers. Carefully separate the membrane from the paper layers.

## Handling

Keep membrane package closed / sealed when unused. Unpack membrane only for direct use and process it immediately after opening. Store, handle and process the membrane in a clean and dust-free area. Use only new and sharp knives or blades, when cutting the membrane.

Always wear protective gloves when handling the membrane. Handle with care, be sure not to puncture, crease or scratch the membrane, otherwise leaks will occur. All surfaces which may get into contact with the membrane during inspection, storage, pretreatment and mounting must be free of sharp edges or angles.

## Pretreatment

The membrane does not need any pretreatment and is ready for use. Please assemble the membrane in dry form.

If you have any concerns about storage, chemical stability, pretreatment or before proceeding, please feel free to contact us for further information.
